

Cummins-Wagner has a proven history of providing custom heat transfer packages for commercial and industrial customers. Our EPS division is happy to introduce three new standard heat transfer models to join our established line of packaged systems.

Providing transfer rates of 50gpm, 100gpm, and 150gpm, the **HTP-SD** heat transfer packages utilize plant steam to heat water to temperatures up to 180F.

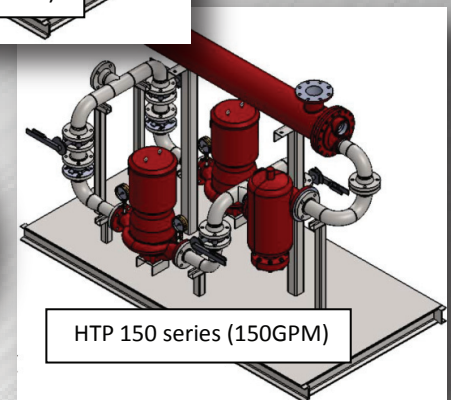

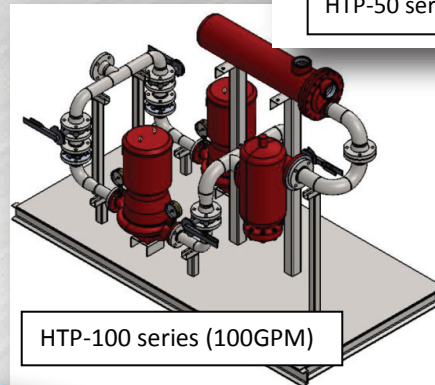

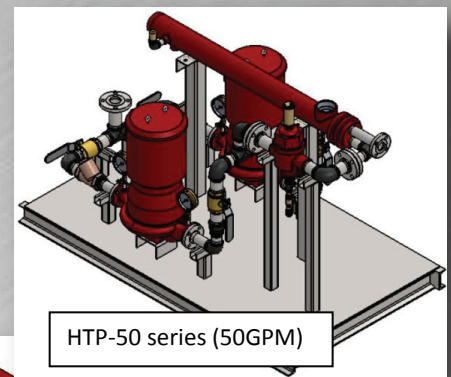

These units use quality Bell & Gossett products and are designed to provide a compact unit that still allows access to components. In addition to the many features of the base model units, EPS also offers optional features that we can add to the base unit, such as steam and condensate manifolds or control panels, to fit our customer's precise needs.

Standard Equipment

- e-80 series Bell and Gossett Centrifugal Pumps with TEFC motors, flow rates of 50gpm, 100gpm, or 150gpm @ 60 feet of head
- Shell and Tube Heat Exchanger
- Air Separator
- Isolation Valves
- Check Valves
- Pressure Gauges
- Schedule 40 carbon steel piping
- Painted carbon steel frames

Optional Features

- Control Panels
- Expansion tanks
- Chemical feed tank
- Steam control valve assemblies
- Condensate trap assemblies
