Stuffing Box Before & After

Discharge Bowl & Shaft Before & After

- Siewert Equipment is fully authorized to repair Vertical Turbine Pumps (VTPs) by numerous manufacturers throughout a wide range of industries.
- Services offered include on-site removal, pickup, repair, return delivery, installation, and start-up commissioning.
- Repair assessments include a detailed inspection report with findings, critical dimensions & tolerances, and recommended repairs needed to restore OEM performance & efficiency.
- Additional services available include laser shaft alignment, vibration analysis, re-rating & custom retrofits.
- Dynamically balance impellers to ISO 1940 G 1.0 tolerance.
- Unique experience includes custom lengthening, custom shortening, mechanical seal retrofits, and hydraulic re-rating of pumps to accommodate the changing needs of major manufacturers and municipalities in Upstate NY.
- Pump Improvement Engineer available to conduct on-site trouble-shooting, hydraulic system analysis, energy conservation projects, and also assists with in-shop equipment inspections and repair.

We Also Offer:

High Precision Laser Alignment
24/7 Emergency Service
Preventive Maintenance Services
Installation & Startup Support
Engineering Services

Manufactured Seal Adapter Upgrade

Here's what our customers have to say:

"They are two of the hardest working young mechanics I have come across in some time and Siewert should be proud to have them working for and representing them as a company."

"I just have to say I'm very impressed with you guys and your operation up there. I knew after being taken around...and seeing your area that your company was a good company to be working with... Again, I'm just very impressed with your customer service and your company as a whole."
