

Duplex Drycooler Recirculation Packages

Cummins-Wagner's NEW Drycooler Recirculation Packages can help your glycol-cooled system run at its most efficient.

Design Features:

- Compact footprints
- Short lead times
- Flow rates of 50, 100 and 150 gpm
- Single point electrical connection

Cummins-Wagner's Engineered Process Systems (EPS) Division designs and fabricates standard and custom packages tailored to your specific requirements, including your conditions of service, equipment from the manufacturers of your choice, and your own piping and electrical specifications. EPS offers a full range of packages, including Heat Transfer Packages, Booster Sets, Glycol Makeup Systems, and more.

EPS has the engineering knowledge and fabrication experience necessary to take your project from design, to build, to startup - all under one roof. EPS will manage your project from beginning to end, and provide you with the exceptional service and quality product that you've come to expect from Cummins-Wagner.

Let us build your Solution.

Turn to Cummins-Wagner for all your Packaged Systems Needs.
