

With an expert staff of application engineers and a team of experienced service and assembly technicians, we have the capability to design and manufacture a custom-engineered chemical feed and/or injection system to meeting your processing requirements. Your packaged system is completely assembled on a skid and delivered to your site ready to work for you.

Everything from design to complete system testing (hydraulic, electrical, process control) is done at our shop. Most importantly, we'll be here to provide continued support by fine-tuning, maintaining and servicing your system to keep it working at the optimal level.

Chemical Feed Systems

MARKETS INCLUDE

- Pulp & Paper • Food & Beverage • Steel
- Power Generation • Pharmaceutical & Biotech
- Chemical & Petrochemical • General Industrial
- Water & Wastewater Treatment

MATERIALS INCLUDE

- 304SS & 316SS
- Hastelloy B & C
- PVDF & fusion-welded PVDF
- FRP • Alloy 20 • PVC, CPVC
